

# Unify. Track. Control.

## Problem Statement

- Fragmented Visibility
- Uncontrolled Costs
- Governance Gaps
- Operational Inefficiency

## Target Users

- Executive Leadership (CXOs)
- IT & Infrastructure Heads
- Operations & Finance
- Security & Compliance Officers

## Key Business Benefits

- Unified Financial Oversight
- Proactive Cost Mitigation
- Precision Cost Allocation
- Automated Operational Reporting
- Enterprise-Grade Governance

# ZYRA

## Unified LLM Gateway for Enterprise Visibility and Governance

Zyra is a unified LLM Gateway Dashboard designed to provide comprehensive visibility, cost management, and governance across disparate AI provider environments. By synchronizing data from Claude, OpenAI, and GitHub Copilot into a single, intuitive interface, Zyra enables organizations to track usage, manage budgets, and maintain rigorous oversight of their LLM infrastructure.

## Zyra: The Unified Command Center for Enterprise LLM Management

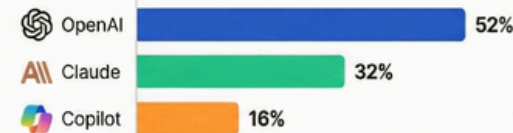

### Unified Financial Intelligence

Unified Spend KPI:

### Total Enterprise Spend

Total Investment Across All Connected Accounts

### Provider Cost Comparison

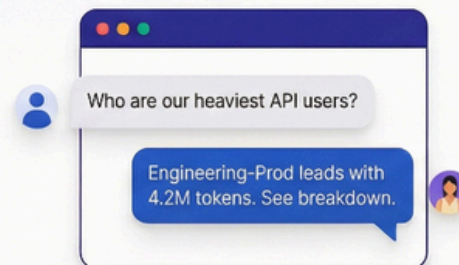

### Proactive Budget Monitoring

**Alert:** Spending at 75% of Threshold. Check Finance.

### Granular Usage & Governance

#### Natural Language AI Assistant

#### Smart Cost Allocation

Tag Workspaces by Department:

- Engineering
- Marketing
- Product

#### Top Workspaces by Usage

Workspace Name	Provider	Token Usage
Engineering-Prod	OpenAI	4.2M
Marketing-Research	Claude	1.8M
Product-Dev	Copilot	950K

# FEATURES & WORKFLOW

## Core Features

- Multi-Provider Integration
- AI-Powered Chat Assistant
- Advanced Analytics Engine
- Automated Budget Alerting
- Centralized Audit Logs
- Role-Based Access Control

## Use Cases / Scenarios

- Departmental Chargebacks
- Budget Safeguarding
- Compliance Auditing

## Security / Compliance

- Data Encryption
- Robust Authentication
- Infrastructure Reliability
- Query Protection

## How It Works

- **Step 1:** Secure Connection: Administrators connect LLM provider accounts using encrypted API keys within the Zyra configuration interface.
- **Step 2:** Automated Synchronization: Azure Functions retrieve usage and cost data from provider APIs at scheduled intervals, normalizing the information into a unified schema.
- **Step 3:** Centralized Processing: Data is securely stored in a PostgreSQL database, where it is processed for real-time dashboard visualizations and AI-powered queries.
- **Step 4:** Insight Delivery: Stakeholders receive insights via the interactive dashboard, automated email reports, or the natural language chat assistant.

## Zyra: The Unified LLM Management Architecture
